## **COMPANY DESCRIPTION**

Hydromat Inc. is the industry leader in the manufacture and assembly of precision transfer machines: rotary, inline, trunnion and EPIC R/T technology. Hydromat also represents the Tornos multi-spindle line including the MultiDECO six and eight spindles and the new MultiAlpha machines. Founded in 1979 and based in St. Louis, Missouri, on a 200,000-square-foot campus, Hydromat has a reputation built on a commitment to product quality, customer service and technological innovation.

Hydromat has been supplying the North American market with metalcutting solutions for more than 30 years through its expertise and industry leadership in rotary transfer machine technology.

## **PRODUCTS/SERVICES**

The Hydromat rotary transfer machine is a modular system consisting of ten to 16 horizontal and five to eight vertical tool spindle units rigidly mounted around a precision cast iron ring. Barstock, coils or blanks can be used.

The newest Hydromat, the EPIC R/T, possesses the reliability and flexibility of its predecessors. What sets this product line apart is EMC technology, featuring plug and play programmable valves integrated into each tool spindle unit.

The Tornos line of multi-spindles includes the MultiDECO 20-mm and 32-mm machines as well as the SAS 16.6 cam-operated lathe. The new MultiAlpha lathes feature independent spindle motors.
